

This document describes some maintenance for surfaces protected the *VF Fuge*

Dust and marks

To remove dust and/or dry marks, try to wipe them out.

Dry mark can also been removed with a gentle rubber.

For persistent marks, clean with fresh water and a gentle sponge.

For still persistent marks, the cleaning will be made with a non anionic cleaning agent and a gentle sponge. Then rince with fresh water. After several such cleaning, it could necessary to re-apply VF Fuge locally.

In-deep marks

For marks with penetration inside of the support, refer to maintenance of the protected material itself.
